# LESSON 10 SOAP WEBSERVICES

Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday
March 28	March 29	March 30	March 31	April 1	April 2	April 3
Lesson 1 Enterprise Architecture introduction and Spring Boot	Lesson 2 Dependency injection AOP	Lesson 3 JDBC JPA	Lesson 4 JPA mapping 1	Lesson 5 JPA mapping 2	<b>Lesson 6</b> JPA queries	
April 4	April 5	April 6	April 7	April 8	April 9	April 10
Lesson 7 Transactions	Lesson 8 MongoDB	Midterm Review	Midterm exam	Lesson 9 REST webservices	<b>Lesson 10</b> SOAP webservices	
April 11	April 12	April 13	April 14	April 15	April 16	April 17
Lesson 11 Messaging	Lesson 12 Scheduling Events Configuration	Lesson 13 Monitoring	Lesson 14 Testing your application	Final review	Final exam	
April 18	April 19	April 20	April 21			
Project	Project	Project	Presentations			

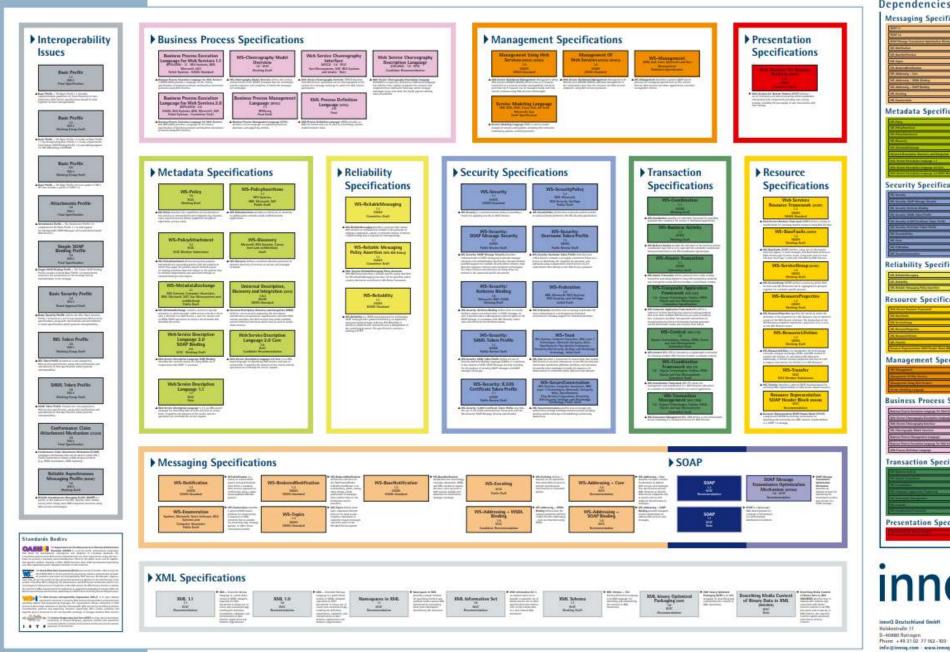

2

#### **SOAP WEBSERVICES**

### Simple Object Access Protocol (SOAP)

#### **SOAP** standards

CH-6330 Chart. Phone: +AL41 243 01 11

#### Soap message

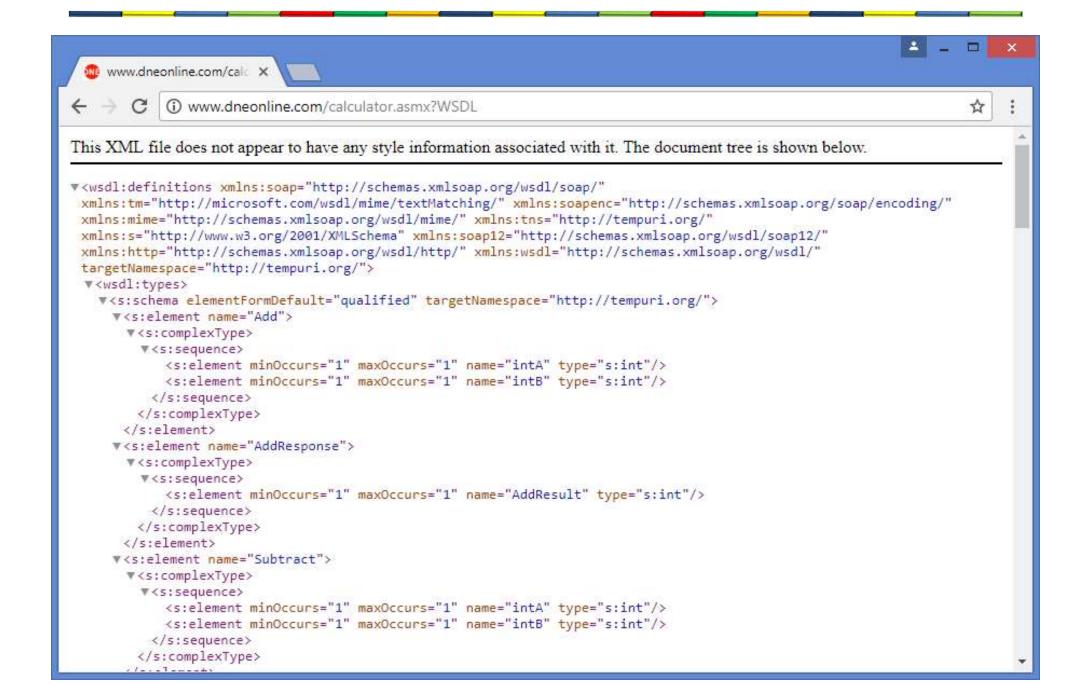

```
Envelope (required)
<?xml version = "1.0"?>
<SOAP-ENV:Envelope xmlns:SOAP-ENV = "http://www.w3.org/2001/12/soap-envelope"</pre>
   SOAP-ENV:encodingStyle = "http://www.w3.org/2001/12/soap-encoding">
                                   Header (optional)
   <SOAP-ENV:Header>
   </SOAP-ENV:Header>
                                  Body (required)
   <SOAP-ENV:Body>
                                                                       SOAP Envelope
                                      Fault (optional)
      <SOAP-ENV:Fault>
                                                                          Header
      </SOAP-ENV:Fault>
                                                                           Body
   </SOAP-ENV:Body>
                                                                           Fault
</SOAP ENV:Envelope>
```

### SAOP request and response

#### Request

#### Response

#### **WSDL**

#### SOAP vs. REST

- SOAP
  - SOAP envelope
  - Standards for
    - Security
    - Transactions
    - Reliability
    - Addressing
    - Etc
  - More complex as REST
  - XML messages
  - Standard way to describe the interface
    - WSDL

#### REST

- No support for
  - Security
  - Transactions
  - Reliability
  - Addressing
  - Etc
- Simple
- Http messages containing text, XML or JSON
- No standard way to describe the interface

#### **SPRING SOAP WEBSERVICES**

# Spring WS

- In a contract first approach we need to:
  - 1. Create a xsd (XML schema) for our web service
  - 2. Generate Java classes based on the xsd
  - 3. Create implementation based on the generated Java classes

# Spring SOAP libraries

```
<dependency>
  <groupId>org.springframework.boot</groupId>
  <artifactId>spring-boot-starter-web-services</artifactId>
</dependency>
```

# Start with xsd: Greeting.xsd

```
<?xml version="1.0" encoding="UTF-8"?>
<xs:schema attributeFormDefault="unqualified"</pre>
  elementFormDefault="qualified"
  targetNamespace="http://springtraining/greeting"
                                                                        Namespaces
  xmlns:tns="http://springtraining/greeting"
  xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType name="Person">
    <xs:sequence>
      <xs:element type="xs:string" name="FirstName" />
      <xs:element type="xs:string" name="LastName" />
    </xs:sequence>
  </xs:complexType>
  <xs:element name="GreetingRequest">
    <xs:complexType>
      <xs:sequence>
        <xs:element name="Person" type="tns:Person" />
      </xs:sequence>
    </xs:complexType>
  </xs:element>
  <xs:element name="GreetingResponse">
    <xs:complexType>
      <xs:sequence>
        <xs:element type="xs:string" name="Greeting" />
      </xs:sequence>
    </xs:complexType>
  </xs:element>
</xs:schema>
```

# Start with xsd: Greeting.xsd

```
<?xml version="1.0" encoding="UTF-8"?>
<xs:schema attributeFormDefault="unqualified"</pre>
  elementFormDefault="qualified"
  targetNamespace="http://springtraining/greeting"
  xmlns:tns="http://springtraining/greeting"
  xmlns:xs="http://www.w3.org/2001/XMLSchema">
  <xs:complexType name="Person">
    <xs:sequence>
      <xs:element type="xs:string" name="FirstName" />
      <xs:element type="xs:string" name="LastName" />
    </xs:sequence>
  </xs:complexType>
  <xs:element name="GreetingRequest">
    <xs:complexType>
      <xs:sequence>
        <xs:element name="Person" type="tns:Person" />
      </xs:sequence>
    </xs:complexType>
  </xs:element>
  <xs:element name="GreetingResponse">
    <xs:complexType>
      <xs:sequence>
        <xs:element type="xs:string" name="Greeting" />
      </xs:sequence>
    </xs:complexType>
  </xs:element>
</xs:schema>
```

#### In POM file

```
■ SpringBootSoap [boot]

▲ Me soap
